

Weekly Stand-Up Meeting Minutes

Purpose

This document outlines the notes and decisions recorded during the group's stand-up meetings. The team will meet every Monday, Tuesday during tutorial, Thursday, and Saturday. It will also include any ad-hoc meetings with the client, Michael.

Information to Record For Each Meeting

- Brief progress updates from the team.
- Current blockers, questions, or risks.
- Decisions made during the meeting.
- Action items, owners, and due dates.

Important: Use the Decisions Made section whenever the team or client agrees to a change, selects an approach, adjusts scope, or confirms a deadline.

Stand-Up Minutes

Week of: May 23rd - May 31st

May 23rd

Meeting Type	Team Stand-Up
Attendees	Everyone - Calvin, Shahveer, Niveetha, Abdul, Shamrita

Discussion and Progress

- The project contract was submitted.
- The team confirmed its selection of the CDMP project.
- The GitHub repository was created using the professor-provided link.
- Initial project setup and documentation responsibilities were assigned.

Decisions Made

- The team will normally hold stand-up meetings every Monday, Thursday, and Saturday.
- The meeting schedule may change when ad-hoc availability or client needs require it.

Action Items

Action Item	Owner	Status / Due Date
Email the client and create initial branches	Shamrita	Next meeting
Prepare the README file	Abdul	Next meeting

Set up the project milestone	Calvin	Next meeting
Begin the questions-and-answers document	Niveetha and Shahveer	Next meeting

May 26th

Meeting Type	In-Person Team Meeting
Attendees	Everyone - Calvin, Shahveer, Niveetha, Abdul, Shamrita

Discussion and Progress

- The team reviewed the project proposal requirements.
- The group discussed the proposed use cases and divided the proposal work among members.
- The team discussed about the UI sketches, personas, and use-case documentation required for the proposal.

Decisions Made

- ➔ Proposal work was divided by use case and documentation component so that all sections could be developed in parallel.

Action Items

Action Item	Owner	Status / Due Date
Develop the use cases	Niveetha	Before proposal review
Create UI sketches for Use Case 3	Abdul	Before proposal review
Develop the personas	Calvin	Before proposal review
Develop Use Case 3	Shahveer	Before proposal review
Create UI sketches for Use Cases 1 and 2	Shamrita	Before proposal review

May 29th

Meeting Type	Ad-Hoc Client Meeting w/ Michael
Attendees	Michael, Calvin, Niveetha, Shamrita

Discussion and Progress

- The team presented its initial vision for the CDMP donations-mapping web application, including a Canada-wide map, provincial drill-down functionality, and filters for political party and date range.
- Michael confirmed that the team has the flexibility to expand beyond the baseline requirements and suggested possible socioeconomic filters using Statistics Canada data.
- The group discussed how project data would be provided and whether the team would be responsible for cleaning, joining, and implementing the data backend. Michael agreed to clarify this with Professor Rafael.
- The team discussed different user access levels. Public users would have basic filters, while approved researchers could access advanced functionality and more sensitive postal-code-level data.
- The group identified political-party comparisons, historical donation data, and a clear statistics panel as important application features.
- For areas with limited donation data, the application should display an explanatory message or disclaimer rather than leaving the results unclear.
- An AI chatbot was discussed as an optional feature, but Michael noted the ethical and technical risks involved.

Decisions Made

- The application will use separate public and researcher access levels.
- Postal-code-level information will be restricted to approved researchers because of privacy concerns.
- The application will include a statistics panel and emphasize a clear, user-friendly interface.
- The team will include an explanatory message or disclaimer when filters return insufficient donation data.
- The team will not pursue the optional AI chatbot and will focus on the core project requirements. Proposal and documentation files will be organized for review during the Tuesday tutorial.

Action Items

Action Item	Owner	Status / Due Date
Update use cases for public and researcher access levels; restrict postal code access	Niveetha	Before proposal submission
Raise the data question with Professor Rafael in class	Shamrita	Next class
Revise UI sketches and add the additional filtering use case	Shamrita	Before proposal submission
Complete UI sketches for Use Case 3	Shahveer and Abdul	Before Tuesday tutorial
Combine and organize the proposal documentation for final review	Entire team	Tuesday tutorial
