

Demo 2

Date: Tuesday, July 7, 2026

Attendees: Calvin, Shahveer, Niveetha, Abdul, Shamrita (Everyone attended our Demo)

1. Milestone goals

- The milestone goal for this sprint was to complete Use Case 2 and Use Case 3 by expanding the CDMP application beyond the public province-level donation map.
- The main goals were to:
 - Add riding-level donation analysis to the public map
 - Support postal-code-to-riding matching in the data pipeline
 - Integrate population and per-capita donation metrics
 - Add timeline-ready data for national, province, and riding views
 - Allow users to filter donation data by province, riding, party, year, metric mode, and boundary set
 - Import GeoJSON riding boundary files for the 2003 and 2013 federal riding maps
 - Create a researcher login flow for authenticated users
 - Allow researchers to view, filter, and export individual donation records
 - Add privacy agreement and activity logging features for protected data access
 - Add frontend integration tests for the timeline and riding-level data flow

2. Progress presented

Completed features or project artifacts

- Riding-level donation analysis was added to the public map
- Timeline-ready riding data models were added
- Boundary sets and federal riding regions were seeded
- Postal-code-to-riding mapping data was imported
- Donation records were matched to federal ridings
- Annual timeline-ready RegionStats were built for:
 - National level
 - Province level
 - Riding level
- Public filters API was expanded to support timeline data
- Existing stats API was extended for riding-level timeline data
- Frontend dashboard was updated to support riding-level timeline data
- Map and region UI were updated for riding-level donation data
- GeoJSON files for Canadian federal riding districts were imported for:
 - 2003 boundary set
 - 2013 boundary set
- Researcher login and account creation were implemented
- Research-user authentication and tier authorization were added
- Privacy agreement gate was built

- Activity logging was added for all access events
- Protected individual donation records API was built
- CSV export was added for filtered donation records
- Frontend integration tests were added using Cypress and Jest
- Tests were created for:
 - Timeline data flow
 - Riding-level data flow
 - Public filters
 - Researcher login
 - Researcher dashboard
 - Export functionality

Work demonstrated by team members

Abdul

- Worked on the researcher login flow
- Implemented the login page
- Ensured individuals can sign up for researcher access
- Contributed to authenticated access features
- Helped with:
 - Tier authorization
 - Privacy agreement gate
 - Activity logging

Niveetha

- Created the researcher page
- Displayed individual donation records on the researcher dashboard
- Worked on filters for individual donation records
- Ensured researchers can filter and search donation data
- Contributed to:
 - Protected donation records API
 - CSV export functionality

Calvin

- Worked on loading riding data into MongoDB
- Loaded GeoJSON mappings for different riding boundary sets
- Handled boundary sets and federal riding regions
- Imported postal-code-to-riding mapping data
- Supported RegionStats aggregation for:
 - National views
 - Province views
 - Riding-level timeline views

Shamrita

- Worked on implementing frontend riding boundaries
- Ensured GeoJSON mappings worked correctly on the map
- Helped connect riding boundary data to the frontend map
- Worked on filtering at:
 - Province level
 - Riding level
- Ensured users can view donation information based on selected regions and boundary sets

Shahveer

- Implemented test cases using Cypress and Jest
- Tested all major functionalities completed in the sprint
- Created tests for:
 - Public map
 - Filters
 - Riding-level data flow
 - Researcher login
 - Researcher dashboard
 - Export functionality

3. Issue Status

Issues completed or closed

- All 19 sprint issues were closed.

Closed Use Case 2 issues:

- Use Case 2: Advancing filtering on postal-code to riding-level analysis, population and per-capita data metrics from additional data sources, and integrating ridings into the data pipeline
- Add timeline-ready riding data models
- Seed boundary sets and federal riding regions
- Import postal-code-to-riding mapping data
- Match donations to federal ridings
- Build annual timeline-ready RegionStats for national, province, and riding views
- Build public filters API for timeline data
- Extend existing stats API and frontend dashboard for riding-level timeline data
- Extend existing map or region UI for riding-level timeline data
- Add frontend integration tests for timeline and riding data flow
- Import GeoJSON of Canadian riding districts for the 2003 and 2013 timeline riding maps

Closed Use Case 3 issues:

- Use Case 3: Access individual donation data through an authenticated account, including account creation, login, verification, and viewing individual donation records

- Set up research-user authentication and tier authorization
- Add activity logging for all access events
- Build the privacy agreement gate
- Build the individual donation records API with protected, filtered, and paginated access
- Add CSV export of filtered records
- Build the research login and privacy-agreement flow UI
- Build the research records dashboard with filters, table, and export UI

Outstanding issues and reasons

- The importing of pre-2004 donation data is still being treated as a future improvement because cleaning that data requires additional effort. The team decided to move that work to Demo 3.

4. TA/Professor Feedback

- Include a map view or a way to access the map through the researcher login
- Continue keeping the README, meeting minutes, use cases, and class diagram up to date
- Make sure documentation reflects the new riding-level data flow and researcher login functionality
- Avoid including features that rely too heavily on AI unless the team can clearly explain and maintain them

5. Next steps

Action Item	Owner	Due Date
Sprint 3 Planning Meeting	Everyone	Wednesday July 8th
